

Stem Cell ELISA Kits

Stem cells are unspecialized cells capable of renewing themselves or differentiate into specialized cells under certain physiologic or experimental conditions. The fate of stem cells is regulated by various growth factors, transcription factors or epigenetic modifications. BioVision offers accurate, fully validated, ready-to-use ELISA Kits for convenient and sensitive quantitation of a wide range of targets in various sample types. These ELISA kits included pre-coated plates with capture/detection antibodies, standards, and buffers and accessory reagents. Our stringent manufacturing and quality control standards allow us to offer the highest levels of performance and consistency with each ELISA kit you run.

Key Features:

- **Accurate:** reproducible results with low intra & inter assay variability
- **High Sensitivity and Specificity**
- **Versatile:** broad range of sample types such as serum, plasma, tissue, cell culture supernatant, urine and many other biological fluids.
- **Convenient:** No special handling or disposal required
- **Extremely Stable:** long shelf life, very low background

Figure: Standard curve for human SMAD3 ELISA Kits (K4200-100) (Left) and human FGF-1 ELISA kits (E4281-100) (Right).

Product Name	Cat. No.	Specificity	Detection Method
ABCG2	K4188	Human	Sandwich
BAFF/CD257	K4181	Human	Sandwich
Caspase-1	K4180	Mouse	Sandwich
	E4588	Human	Sandwich
Caspase-2	E4589	Human	Sandwich
	E4590	Rat	Sandwich
Caspase-3	E4592	Rat	Sandwich
β-catenin	K3382	Mouse	Sandwich
	K3381	Human	Sandwich
	K3383	Rat	Sandwich
